1. University Student Profile Portal

Your university wants a simple webpage to display student information. Design a student profile page that contains a profile picture, student information, academic details, and achievements.

Requirements:

- Create a navigation bar with Home, Profile, Courses, Results, and Contact.
- Use **Flexbox** for the navigation bar.
- Create a student profile card.
- Use position: relative for the profile card.
- Place an "Active Student" badge at the top-right using position: absolute.
- Create separate sections for: ○ Personal Information
    - ○ Academic Information
    - ○ Skills
    - ○ Achievements
- Use **CSS Grid** for the academic information.
- Use appropriate margin, padding, border, background, and font properties.
- Add hover effects to navigation links and buttons.

2. University News Portal

You have been asked to develop the homepage of a university news portal where students can read recent announcements and news.

Requirements:

- Create a header containing the university name/logo.
- Create a navigation menu using **Flexbox**.
- Create a "Breaking News" section.
- Display one main news article with an image.
- Use **float** to allow the article text to flow around the image.
- Create a "Latest News" section containing at least 6 news items.
- Arrange the news items using **CSS Grid**.
- Add a "New" badge to selected news cards using position: absolute.
- Add a fixed "↑" button at the bottom-right using position: fixed.

- Add a footer containing contact information and useful links.

3. Student Dashboard

A university wants an online dashboard where students can see their academic information.

Requirements: Create the following sections:

- Sidebar
- Top navigation
- Student profile
- Current courses
- GPA
- Attendance
- Examination results
- Notices
- Footer

CSS requirements:

- Use position: fixed for the sidebar.
- Use **Flexbox** for the top navigation.
- Use **CSS Grid** for the dashboard cards.
- Use position: absolute for notification badges.
- Use gap, padding, margin, and border.
- Create different visual styles for passed and failed courses.
- Make the layout responsive using media queries.

4. University Faculty Directory

Create a faculty directory for a university department where students can view information about teachers.

Requirements:

- Create a department header.
- Create a navigation bar using **Flexbox**.
- Create at least **6 faculty cards**.
- Each card should contain: ○ Photograph
    - ○ Name
    - ○ Designation
    - ○ Research interest
    - ○ Email
    - ○ Profile button
- Arrange the faculty cards using **Flexbox or Grid**.
- Add an "Head of Department" badge using position: absolute.
- Use position: relative for the faculty card.
- Add hover effects.
- Create a separate research-interest section using **Grid**.

5. Online Course Platform

Develop a webpage for an online learning platform where students can browse available courses.

Requirements:

- Create a navigation bar.
- Create a hero section containing a heading and search box.
- Create at least 8 course cards.
- Each course card must contain: ○ Course image
    - ○ Course title
    - ○ Instructor
    - ○ Duration
    - ○ Price
    - ○ Enroll button
- Use **Grid** to arrange the course cards.

- Use **Flexbox** inside each course card.
- Add a "Popular" badge using absolute positioning.
- Create a course description section using float.
- Add hover effects.

6. University Event Website

Your department is organizing a technology festival. Develop a website to provide students with information about the event.

Requirements:

- Event title and logo.
- Navigation menu.
- Event countdown area.
- Event description.
- Event schedule.
- Speaker section.
- Registration section.
- Venue/contact information.
- Footer.

CSS requirements:

- Use **Flexbox** for navigation.
- Use **Grid** for the event schedule.
- Use **Flexbox/Grid** for speaker cards.
- Use position: absolute for event badges.
- Use position: fixed for a registration button.
- Use float for the event-description image.
- Add hover effects to buttons.
