**1. University Student Profile**

**Scenario:**
A university wants a webpage to display a student's profile. The page should contain the student's photo, name, ID, department, short biography, educational qualifications, skills, and contact information.

**Task:**
Develop the webpage using appropriate HTML and CSS.

**Requirements:**

- Use semantic HTML where appropriate.
- Display education information in a table.
- Display skills using a list.
- Add links for email and social media.
- Use background, font, text, margin, padding, and border properties.
- Apply different styles when the user hovers over links.

**2. University Notice Board**

**Scenario:**
The university wants an online notice board. Each notice should contain a title, publication date, description, and a "Read More" link.

**Task:**
Create a notice board containing at least five notices.

**Requirements:**

- Use <article> for individual notices.
- Use headings and paragraphs appropriately.
- Use CSS borders to separate notices.
- Use padding and margin to create proper spacing.
- Use different background colors for different sections.
- Create a hover effect for "Read More".

### 3. Student Registration Page

**Scenario:**
A university wants to collect information from students for a programming competition.

**Task:**
Create a registration webpage containing:

- Full name
- Student ID
- Email
- Password
- Date of birth
- Gender
- Department
- Programming languages known
- Address
- Participation type
- Submit and Reset buttons

**Problem-solving requirements:**

- Decide which <input> types are appropriate.
- Decide when to use radio buttons and checkboxes.
- Use <label> correctly.
- Group related information logically.
- Design the form using margin, padding, border, font, and background properties.

### 4. Personal Portfolio

**Scenario:**
A student is applying for an internship and needs a personal portfolio website.

The website should contain:

- Introduction
- About Me
- Education
- Technical Skills
- Projects
- Achievements
- Hobbies
- Contact information

**Task:**
Create a single-page portfolio.

**CSS requirements:**

- Create a hero section with a background image.
- Use different font properties for headings and body text.
- Use text alignment and text transformation.
- Use margin and padding for spacing.
- Use borders around project cards.
- Style links using :link, :visited, :hover, and :active.

**5. News Article Website**

**Scenario:**
A news organization wants to publish an online article.

The page should contain:

- News headline
- Author
- Publication date
- Main image
- Article paragraphs
- Important quotation
- Related news
- Footer

**Task:**
Create the webpage using semantic HTML.

**Problem-solving:**
Students must decide where to use:

- <header>
- <article>
- <section>
- <aside>
- <footer>
- <nav>
